

BLANCO MED SYSTEMS

Referenceproject AK Barmbek in Hamburg

The most modern hospital in Germany:

Completely new hospital with 3.300 rooms, 676 beds, 8 OTs,
7 surgical rooms and 8 delivery rooms.

Capacity for approx. 35.000 inpatients and 35.000 outpatients
per year.

The new clinical centre Barmbek: built for the future.

In the beginning there was an **in Europe unique project**: the development of the **"hospital for the future"**. The objectives were modern, patient-near procedures and future-oriented health services as well as an optimized price-performance ratio on high clinical standards. The new hospital building of the clinical centre had to measure up to these requirements in all areas.

For this challenging project **BLANCO MEDICAL SYSTEMS** supplied the **complete equipment of the clinical centre** with about 380 functional cabinet installations made of epoxy coated steel for all areas - from the operating theatres, to baby care and supply corridors - including all built-in devices and additional components.

The **high efficiency of BLANCO MED SYSTEMS** is shown especially in the order related design of **outstanding customized solutions**. One example are the **absolutely x-ray proof pass-through cabinet installations** with lead inlays. They act as partition with electromagnetic interlock.

Baby care ward
Double-sided installation with

- Cristalan worktop
- integrated baby bathtub

Gynaecology/delivery room - observation

- Cabinet installation with s/s-worktop and sink

C-section-OT
